Clockaudio's New USB Interface Creates **Virtually Limitless Customization Capabilities for** **Today's "Remote Warriors"**

August 10, 2020 - Clockaudio is proud to introduce the CUI-2, an incredible robust USB interface, and the company's latest product for professionals seeking custom options for microphone solutions in remote and other environments.

The CUI-2, Clockaudio's USB Interface, enables Clockaudio microphone solutions to be customized and accessible to the remote work force regardless of the work type, work style and professional needs. Easy to install and even easier to use, the CUI-2 allows you to choose any microphone, any RGB touch switch, and with a simple USB connection, create a flexible solution that works for you.

With the CUI-2, you can now maintain the highest degree of audio quality which enables crystal clear communication and sound integrity while combatting the dreaded audio fatigue that comes with poor sound quality. The product is ready to ship in August 2020.

Whether you are a day trader, gamer, podcaster, presenter, yoga instructor, teacher or other professional working from home, this product can be uniquely designed to suit your particular needs and application. Robert Moreau, Managing Director for Clockaudio North America shares, "For many, working from home is a new work reality and a "new normal" for many companies and individuals. With the CUI-2, we're able to make all of our solutions accessible to "Remote Warriors" and other professionals while enabling them to communicate more effectively and with a higher level of audio quality."

Other highlights of the USB Interface include simple under table mounting, a USB stereo microphone preamp interface with a low noise design. The CUI-2 is USB Bus Powered, 24-bit/48kHz, plug-and-play driverless with PC, MAC and others. Optimized for Clockaudio Microphones, this USB Interface has a 10-50dB gain control, 48V phantom power, touch switch port for use with Clockaudio Capacitive Touch Switches, LED brightness control, and RGB color selection for mute and unmute.

CLOCKAUDIO

The device also features a latching mute and push to mute modes, VU metering for microphone gain setup via TS buttons. The CUI-2's demo mode plays an audio test tone to the PC/MAC and cycles the LED colors. Rounding out its features are its compact aluminum enclosure and flange mounts for easy under table or desk installation, tamper resistant front cover and optional 12V external supply.

Elevating the standard for prosumer tools, the CUI-2 is another way that Clockaudio is clearly different when it comes to delivering solutions for a COVID-19 and post-COVID-19 world. ABOUT CLOCKAUDIO

For over 25 years, Clockaudio has been dedicated to manufacturing innovative pro-audio products. With Corporate Headquarters and Manufacturing located in the United Kingdom and offices located in North America (Montreal, Canada) and Asia (Singapore), Clockaudio is led by a talented team of audio specialists dedicated to quality, service and innovation.

On a global level, audio professionals actively seek out and recommend Clockaudio for its reputation as a trusted and responsive manufacturer and its customer driven approach to audio solutions. Central to this is the in-house research and development that Clockaudio consistently reinvests in which allows clients to explore customized prototypes and develop specific briefs in partnership.

Consultants and contractors alike help to drive Clockaudio's product development process and appreciate the opportunity to be involved in the engineering process and final solution. The ability to customize is just one of the many factors which makes Clockaudio clearly different.
